Hello Phil:

FYI: The stakeholders meeting in Austin yesterday went well: good attendance, mostly by former TCEQ hands now working as consultants, who asked interesting questions. TCEQ encouraged the attendees to send in more feedback, and provided a timetable showing that this rule-making process may be completed during the second half of August, next year.

I brought about 45 digital images of the oversize hard copy attachments to UEC's application for in-situ uranium mining in Goliad county. The attached image file is a downsized example of one of the best images obtained with David Murry's assistance (hopefully, no one will mind that the paper folding marks show on the photos).

Jim Neeley helped by providing scanned images of the UEC proposed project's hard copy attachments that fitted the scanner. It is possible that we will be able to gain a better understanding of the proposed project thanks to the information that we have now available in this office.

Jim also provided a CD with Texas Class I well data containing Lat-Long information, which will serve to supplement that obtained during my file review of last month. Mike Bechdol has assisted in the evaluation of these Lat-Long data by developing a couple of county maps, and the results look very good. Please let me know if you have questions on these matters. Thanks,

JETorres
